

Textiles

Other Textiles

As well as printed textiles for fashion and home furnishing AVA help to create beautiful designs for other textile products such as textile wallcoverings, kitchen textiles (tea towels, aprons, oven gloves, etc), shopping bags, school bags, footwear, etc. AVA CAD CAM offers a wide range of powerful design tools to easily transform an original pattern from scanned or supplied artwork into a commercially sound product. AVA colour tools facilitate effective communication between customers and suppliers and minimise errors by providing an accurate preview of how the design will appear when manufactured. And finally, if you wish to visualise the texture, design and colour of your product AVA's 3D mapping software, AVA Materialize, will show a mockup of the design on your product before manufacturing.

Key Features & Benefits

- Dramatic reduction in lead times
- Significantly reduced environmental impact through reduced waste
- Easy integration with Adobe Photoshop
- Real time repeat editing
- Accurate colour management all the way from computer monitor through to digital and/or analogue production
- Unlimited colourways
- Remote proofing
- 3D product visualisation
- Expert training and support for staff

Why Choose AVA?

Environmental concerns are increasingly high on the agenda of many textile printing enterprises. AVA's Production Colour Matching (PCM) technology can dramatically reduce the environmental footprint of textile printing businesses by significantly reducing the number of attempts required to achieve an acceptable match to an approved sample/target or a previous production batch.

But perhaps the biggest single advantage which our customer partners derive from working with AVA (as opposed to relying entirely on cheap generic software) is the industry specialised training and support which comes with the software. Any technology is only as good as the people using it. That is why AVA places so much emphasis on the training and support offered by a specialised team. As new features are developed within the AVA software, and third party technology evolves and improves all the time, our multilingual team is there to guide your staff every step of the way - providing an opportunity for 'Life-Long Learning' - the continuous acquisition of new skills and expertise - increasing productivity and professional expertise while ensuring that your team feels motivated and valued.
